CLARETI TRANSACTION CONTROL

Fast, accurate reconciliation of any data, any where

Legacy technology makes effective, dependable control of your transactions and operations impossible. Unable to manage today's complex data flows and formats, yesterday's solutions drain your resources and force your team to create manual workarounds, putting your business at risk.

Clareti transaction control can ingest, validate and transform data of any shape or size, regardless of width or complexity, in a single solution. So no matter how complex your controls, you can build and manage them all in one place, increasing efficiency, optimising resources, and minimising risk.

Delivering

A solution to legacy problems: Fast creation of non-standard controls reduces manual tasks and associated risks.

Easy, flexible reconciliation, wherever you need it: Reconcile any data, in any format, across any area of your business.

Simple compliance and controls: In an increasingly complex regulatory and operational environment.

Increased efficiency, reduced costs, and minimised risk: Through the replacement of outdated, unsuitable legacy technology.

Easy, flexible reconciliation wherever you need it, simplifying complexity and solving the legacy problems that are holding your business back.

The Clareti difference

- **Advanced rules engine**: delivering some of the industry's fastest, most accurate matching.
- **Self service onboarding of new controls**: Up to 97% reduction in onboarding time.
- **N-way reconciliations**, built easily in one single solution.
- **Rapid workflow** and exception management tools for swift issue resolution.
- **Clear data visibility** and audit trails for demanding governance and regulatory compliance standards.
- **Effortless scaling**: Reconciliations built to grow with you.
- **Interactive visualizations, dashboards and reports**, for value-adding regulatory reporting.

GRESHAM TECHNOLOGIES / CLARETI CONTROL

Clareti transaction control success stories

- A global, tier one investment bank struggling to get a cost-effective and compliant view of their data in a complex trading and regulatory environment selected Clareti transaction control to replace their fractured, ageing legacy stack. Following an 8 week implementation period, they increased control onboarding capacity by 3000% and saved £3 million a year in operational costs.

- A global bank which urgently needed to create complex new controls to comply with a G20 regulatory deadline was running out of time. It chose Clareti transaction control to provide a modern, flexible solution which enabled it to meet regulatory expectations without straining its internal IT resources.

Powered by the Clareti platform

A modern, purpose-built, data integrity and control platform designed by industry experts, Clareti is built for a cloud-native environment by technology leaders with decades of industry experience. It brings data confidence to organisations around the world and has been successfully adopted across banking, investment and wealth management firms, insurance, and by complex multi-nationals.

Deployed in your cloud, their cloud, our cloud, or on-premise – we know how important flexibility is, it's always up to you
